

Project presentation guidelines

The group project presentation should be prepared as a 12-15 slides long Powerpoint presentation. The presentation should last a maximum of 15 minutes including questions (this could be useful as a training for your future master thesis discussion). Please ensure that each group member take part in the presentation.

The presentation structure could be as follows:

- 1-2 slides explaining the topic treated and the main lab goals;
- 4-5 slides showing the methodological approach (how you proceeded in the analysis);
- 7-8 slides showing the main results obtained critically analysed.

Make use of figures, schemes and formulas while limit the number of words present in the slides.

The presentation must be uploaded on WeBeep in the section "Assignments" ("Consigne"), folder "Project_presentations" before the deadline. Please rename the presentation file with your group name (e.g. "GroupA.pptx").

The delivery of a brief word report in which to report all the analyses performed (not reported in the presentation) is suggested too.
